Incident Report

Scenario 1 – Suspicious Email

Q1: What is your name and department?

A: The employee's name and department are not yet known.

Q2: What device or system is affected? (Hostname / IP)

A: The employee's computer and browser may be affected. The hostname and IP address are unknown.

Q3: What did you notice, and when exactly did it start?

A: After clicking the email link and entering login details, the page went blank. The browser became slow and showed pop-up ads. The exact time is unknown.

Q4: Did you click any links or open any attachments?

A: Yes. The employee clicked a link in an email claiming to be from HR and entered their login details. No attachments were opened.

Q5: Is the device still connected to the network?

A: It is not yet confirmed whether the computer is still connected to the network.

Q6: Has anyone else in your team noticed anything similar?

A: It is unknown whether other employees received the same email or experienced similar problems.

Scenario 3 – Unauthorized Access

Q1: What is your name and department?

A: The employee's name and department are not yet known.

Q2: What device or system is affected? (Hostname / IP)

A: The employee's account may be compromised. The device and IP address are unknown.

Q3: What did you notice, and when exactly did it start?

A: The employee received an email about a login from Romania at 3:00 AM while they were asleep. They have used the same password on multiple websites for two years.

Q4: Did you click any links or open any attachments?

A: It is not yet known whether the employee clicked any links or opened attachments.

Q5: Is the device still connected to the network?

A: The device's network connection status is not yet confirmed.

Q6: Has anyone else in your team noticed anything similar?

A: It is unknown whether other employees experienced similar login attempts.

1. What information was critical?

The affected account or computer, the time of the incident, and what the employee noticed.

2. What did analysts miss?

They did not confirm the device's IP address, network status, or whether other employees were affected.

3. What would you do differently?

I would gather complete information, secure the affected account or computer, and report the incident to the cybersecurity team.
