# 🎯 Exercise 2: Create Your First Incident Ticket

HANDS-ON EXERCISE | 20 MINUTES | INDIVIDUAL WORK | PEER REVIEW

Read the scenario carefully. Fill in ALL ticket fields on your worksheet. Every blank must be completed — just like in a real SOC.

## 📋 SCENARIO: The Monday Morning Incident at ABC Corporation

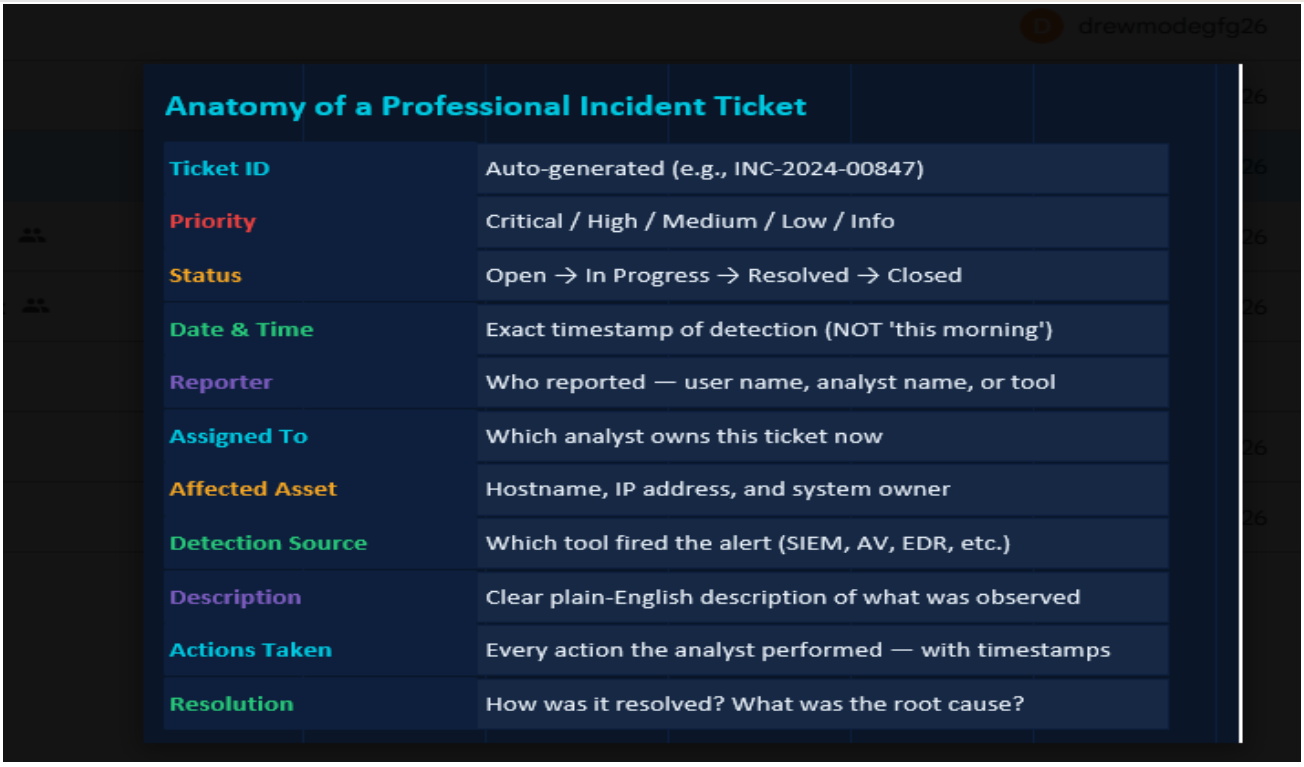

It is Monday, November 18, 2024, at 09:14 AM. You are the Tier 1 analyst on morning duty at ABC Corporation, a Philippine BPO company with 500 employees in Makati City.

Your SIEM (Splunk) generates an alert: "ALERT: Multiple failed login attempts — Account: jdelacruz@abccorp.ph — 47 failed attempts from IP 45.142.212.100 (Germany) between 08:50 AM and 09:14 AM — Source: Office365 Login Logs"

At 09:17 AM, you receive a phone call from Juan de la Cruz himself (Employee ID: EMP-1042, Customer Service Department, Extension 204). He says he received an email this morning from "IT Support" asking him to click a link to verify his account due to 'suspicious activity.' He clicked the link and entered his login credentials on a page that looked like the company's Office365 login page. The page then gave an error message. His account is currently locked.

You check VirusTotal for IP 45.142.212.100 — it shows 34 out of 90 security vendors flagging it as malicious, associated with credential theft campaigns. You check the Office365 admin panel and see that before the lockout, there was ONE successful login from the same German IP at 08:49 AM — one minute before the failed attempts started.

Name: Trail B. Bajenting (CMT BATCH 3)

**Here is the simple version you can write in your worksheet.**

1. **Ticket ID: ABC-2024-1018-01**
2. **Priority:** Critical /A suspicious foreign login, 47 failed attempts, and stolen credentials indicate a possible account compromise.
3. **Status:** Open because it is under investigation**.**
4. **Date & Time of Detection:** November 18, 2024, 9:14 AM. Multiple failed login attempts account of jdelacruz@abccorp.ph -47 failed attempts from outside ip address between 08:50 AM and 09:14 AM
5. **Reporter:** Juan de la Cruz, reported through a phone call at 9:17 AM.
6. **Affected user & Asset**: log in credentials, Juan de la Cruz, Office 365 account, the account was locked and from IP 45.142.212.100 german ip
7. **Detection Source:** Splunk SIEM and Office 365 login logs.
8. **Description:** Juan received a phishing email pretending to be from IT Support. He clicked the link and entered his Office 365 credentials. The system detected 47 failed login attempts and one successful login from a suspicious German IP.
9. **Immediate actions you would take:** Keep the account locked, reset the password, revoke active sessions, preserve evidence, and escalate if beyond the knowledge or if it still not resolved.

**10. Severity Justification (Why this priority level?):** Critical because the employee entered his credentials on a fake website, and a suspicious successful login suggests his account may be compromised.
